My name is Neil Pelfrey, and I'm a Computer Science and Mathematics major at USCA. I'm currently in my 6th year of college, but only my second at this campus. I went to USC Columbia for four years before transferring here to finish my degree. I didn't change to this major until my 3rd year at USC, which is why I haven't graduated yet. This should be my last year though!

Portfolio

About CSS3 Foundations CSS3 Foundations is a hands-on approach to guide readers through the process of using CSS3 features and techniques to take a basic website template and turn it into a real-world, modern and future proof website.

From learning how to add CSS to a page, to using advanced techniques such as Responsive Web Design, each example is clear and well structured, lending to the overall main project that the book builds upon throughout.

CSS3 Foundations tackles many of the difficulties faced when building a website; fixing inconsistencies in older browsers, safely using CSS3 features still in development, and optimizing a websites layout for the device it is being viewed upon.
